

● EZ-Steer™ system saves fuel, eases operator fatigue

AgGPS® EZ-Steer™ System includes the EZ-Steer™ assisted-steering option, which extends the capability of the EZ-Guide™ Plus GPS guidance system by automatically turning the steering wheel of the vehicle with an electric motor. The EZ-Steer™ electric motor drive can be installed on more than 460 different models of agricultural vehicles with around 20 different low-cost, platform-specific steering column brackets. The product allows the operator to focus on other tasks — spray nozzle performance, planter operation, or combine header height. The EZ-Steer™ system gives the operator the fuel and input savings of straighter rows while reducing driver fatigue.
