

ISOBUS FileServer Software

AGCO Corporation's ISOBUS FileServer is an ISO-11783 conformant file server available on Implement Controller Area Network (CAN) Bus to provide data storage and retrieval service for all implement Electronic Control Units (ECUs) on the bus. By providing a central, common storage for all the implement ECUs on the CAN bus, the File Server facilitates operator convenience, reduces cost of implement ECUs, and eases integration of third-party products. The FileServer has two volumes: one internal, non-movable volume for permanent data storage and an external movable volume (SD card) for data transfer between machine-and-machine or machine-and-farm computers. AGCO's ISOBUS FileServer software was released worldwide on Dec. 1, 2006, and pre-installed in both GTA Console I and Console II terminals, which are optional components available in Massey-Ferguson, Valtra, Challenger, Gleaner, Hesston, White, Rogator, Terragator, and Spra-Coupe brands of products, including tractors, combines, balers, planters, and sprayers.
