ASABE TO REVISE STANDARD ON BALLAST AND TREAD SETTINGS FOR AG TRACTORS

ST JOSEPH, MICHIGAN— The American Society of Agricultural and Biological Engineers (ASABE) has initiated the revision of ASAE EP562.1 SEP2015 (R2019) Procedure for Determining Recommended Ballast and Minimum Rear Wheel Tread Settings for Agricultural Tractors with Agricultural Front Loaders.

The project will improve the guidance for ballasting with the loader attached to the tractor, remove the alternate tread setting chart and update normative references.

Anyone interested in participating in the development and review of this standard or the ASABE Loader committee is encouraged to contact ASABE Standards Administrator Sadie Stell for more information (stell@asbe.org).

ASABE is recognized worldwide as a standards-developing organization for food, agricultural, and biological systems, with more than 280 standards currently in publication. Conformance to ASABE standards is voluntary, except where required by state, provincial, or other governmental requirements, and the documents are developed by consensus in accordance with procedures approved by the American National Standards Institute. For information on this or any other ASABE standard, contact Scott Cedarquist at 269-932-7031, cedarq@asabe.org. A current listing of all ASABE standards projects can be found on the ASABE web site at www.asabe.org/projects.

ASABE is an international scientific and educational organization dedicated to the advancement of engineering applicable to agricultural, food, and biological systems. Further information on the Society can be obtained by contacting ASABE at (269) 429-0300, emailing hq@asabe.org or visiting www.asabe.org/.
